Financial Institutions

Jaguar Software Development is committed to developing and delivering scalable check-imaging systems that even the smallest of financial institutions can afford.

Digital Check Processing – This versatile software solution from Jaguar is modular-based providing not only Branch Capture solutions for any size financial institution but all the ancillary software required to manage check processing. Including interfaces to your core system, correspondent bank, or the Federal Reserve.

Remote Deposit – All financial institutions need to offer remote deposit to their Customers and Jaguar has remote deposit options for any size financial institution that will meet or exceed your customers' expectations. Whether the customer only has a few checks a week or thousands per day Jaguar has a solution to address your customers' needs. And, for those customers who need more than just Remote Deposit – check out Jaguar's full line of REMITTANCE products.

ATM Deposit Automation – No more balancing envelope deposits and the hassle of explaining to a customer why his account wasn't credited for the check deposit made in an envelope ATM that didn't get processed until a day later. Jaguar's ATM Deposit Automation software provides everything needed for complete end-to-end deposit automation. ATM Deposit Automation works with both image deposit ATMs and Intelligent Teller Machines. NO MORE ENVELOPE DEPOSITS – WORKS WITH ALL BRANDS OF ATMs.

webATM – Jaguar's webATM was developed to provide banks and credit unions a quick, inexpensive, easy way to deploy image enabled ATMs and other deposit automation devices. WORKS WITH ALL BRANDS OF ATMs.

Payment Processing / Check Processing

Remittance Systems simplify the collection and processing of account receivables by "capturing" images of checks and associated documentation (such as payment coupons) into a digital format for electronic processing and transmission to a financial institution.

Payment Processing – Digital Payment Processing will automate the data entry of account receivables through the use of a desktop check scanner and software that captures information from payment coupons, statements, full page documents, check stubs and checks, plus electronic bill pay processing.

Web Remit – webRemit was designed from the ground up to be efficient, easy to use, flexible, and cost effective for businesses, non-profits, and government agencies.

Desktop Remit – Desktop Remit is a full featured remittance processing system design to be used at the desktop with a standard desktop check scanner and a basic PC.

ePM – Electronic Payments Manager eliminates the paper checks by concentrating all payments electronically from the various banks and processors.

Intelligent Fields – Intelligent Fields from Jaguar Software will finish the job by automatically completing the fields you need for posting your payments.
